Abstract

This is the abstract. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Vestibulum augue turpis, dictum non malesuada a, volutpat eget velit. Nam placerat turpis purus, eu tristique ex tincidunt et. Mauris sed augue eget turpis ultrices tincidunt. Sed et mi in leo porta egestas. Aliquam non laoreet velit. Nunc quis ex vitae eros aliquet auctor nec ac libero. Duis laoreet sapien eu mi luctus, in bibendum leo molestie. Sed hendrerit diam diam, ac dapibus nisl volutpat vitae. Aliquam bibendum varius libero, eu efficitur justo rutrum at. Sed at tempus elit.

Keywords: projection pursuit, optimization, jellyfish optimiser

Let's use British English ("American or British usage is accepted, but not a mixture of these")

1. Introduction [Nicolas and Jessica]

The artificial jellyfish search (JS) algorithm [1] is a swarm-based metaheuristic optimisation algorithm inspired by the search behaviour of jellyfish in the ocean. It is one of the newest swarm intelligence algorithms [2], which was shown to have stronger search ability and faster convergence with few algorithmic parameters compared to classic optimization methods [1]-[3].

The rest of the paper is organised as follows: Section 2 introduces the projection pursuit method, including the indexes function and optimisation. Section 3 introduces the jellyfish optimiser and proposes mathematical expressions to measure the . Section 4 applies the jellyfish optimiser through different projection pursuit problems with varying dimensions and index functions. Section 5 concludes the paper.

2. Projection pursuit, index functions and optimisation [Di and Sherry]

3. The jellyfish optimiser and property for good optimisers [Nicolas and Jessica]

The jellyfish optimiser [1] …

Laa and Cook [4] has proposed five criteria for assessing projection pursuit indexes (smoothness, squintability, flexibility, rotation invariance, and speed). Since not all the properties affects the optimisation, here we define the three relevant properties (smoothness, squintability, and speed) mathematically and show that the jellyfish optimiser …

4. Application [Di and Sherry]

The jellyfish optimiser has been implemented in the tourr package [5] and we will use the diagnostic plots proposed in the ferrn package [6] to visualise the optimisation process.

4.1. Going beyond 10D

The pipe-finding problem is initially used to investigate indexes and optimisers in Laa and Cook [4], and we extend it from a 6D problem to a 12D problem.

Jellyfish optimiser, as a multi-start algorithm, is efficient in [...] for high-dimensional problems

4.2. On skewness and kurtosis index

4.3. Another data example

5. Conclusion [Di and Sherry]
